

Safety and Quality Assurance

Our mission is to assess all aspects of JTF-RH to ensure optimal quality by inspecting facilities, safety equipment, and auditing drafted and awarded contracts to provide the highest quality of work performance ensuring the safe and expeditious defueling of Red Hill Bulk Fuel Storage Facility.

What We Do and How We Do It

Our Safety and Quality Assurance Team monitors and evaluates various aspects of a project, service, or facility to ensure the standards of quality are being met. We use the Quality Management System to develop the Requirements Traceability Matrix (RTM) for internal and external regulatory requirements. RTM will ensure our Integrated Master Schedule and Work Breakdown Structure meets each milestone and is completed on time.

All of our auditors (Safety, Environmental, Contracting, Engineering, and Medical) use the RTM and checklists to perform surveillance on all phases of operations within the JTF-RH Joint Operation Area to correct and resolve any auditing discrepancies. Examples of the programs or items that our QA Auditors review and provide evaluation for are Contract Quality Validation, Lock Out/Tag Out, Occupational Health, Fuel and Hazardous Chemical Spill Response, Personal Protective Equipment, and Spill Response Containments/Kits.
